DETAILED ACTION

Claims 1-13 are pending.

Election

Applicant's election without traverse of Group I, claims 1-5 and 11, in the reply filed on October 27, 2006, is acknowledged.

Claims 6-10 and 12-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention(s), there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 27, 2006.

Drawings

The drawings filed March 16, 2004, have been approved by the Examiner.

Foreign Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject-matter which the applicant regards as his invention.

Claims 1-5 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the culture medium" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Thompson (US Pat No. 4267038), cited on enclosed PTO-892 Form.

The claims are drawn to a method for culturing blue-green algae comprising, obtaining algae species, inoculating a culture medium, carrying out mass culture and the culture medium contains high-nitrogen organic matter substance, which is fermented and aerated to give the culture medium a pH of 8 or greater. The substance can be a high protein organic matter. The medium is not added with inorganic salts or carbonate compounds but edible microorganisms can be further added to the culture medium. Further a blue green algae is claimed.

Thompson teaches a method for culturing blue-green algae comprising, obtaining algae species (note column 20, lines 30-35), inoculating a culture medium, carrying out

Art Unit: 1651

mass culture and the culture medium contains high-nitrogen organic matter substance, which is fermented and aerated to give the culture medium a pH of 8 or greater (column column 29, line 51). The substance can be a high protein organic matter. The medium is not added with inorganic salts or carbonate compounds but edible microorganisms can be further added to the culture medium (column 3, lines 10-15). Further a blue green algae is claimed. Also note column 1, lines 55-65 and column 29, lines 35-55.

The claims are identical to the cited disclosure and are, therefore, considered to be anticipated by the teachings therein. A substance which can be a high protein organic matter is inherent to the teachings of protein conversion at column 1, lines 39 and 57 because the disclosure of processing food waste streams as a culture medium source for algae production by the reference, will inherently contain high protein organic matter for algae production. Also the algae are edible and can be further added to the cultured medium during processing as can bacteria which are also edible microorganisms. Blue green algae strains and species there are clearly disclosed by the reference.

Conclusion

All claims fail to be patentably distinguishable over the state of the art discussed above and cited on the enclosed PTO-892 and/or PTO-1449. Therefore, the claims are properly rejected.

The remaining references listed on the enclosed PTO-892 and/or PTO-1449 are cited to further show the state of the art.

No claims are allowed.
